

# Backend: MongoDB

## Node JS – Blog Posts Schema

---

The following exercise contains the following subjects:

- ◆ MongoDB

### Instructions

Lets create a mongo database that holds blog posts.

**Users** are able to create blog **post's** and create **comments** on blog post.

### Part 1

#### Design your Data Model

1. Create an appropriate schema for a blog.
  - What collections do you need?
  - How are you going to structure your documents?
  - Should you embed your data or use references?

Resources to read about it:

The Mongo Docs have a great explanation on this. For example:

[this one](#)

Youtube videos. For example:

[this one](#)

Articles. For example:

[this one](#)

Take your time understanding how to design your data model. Look at different resources on the web.

Write down your design on a piece of paper or an online schema creator.
